Career Objective

Power BI Developer with 1+ years of experience in the Microsoft Data Stack (Dynamics 365, Fabric, SQL Server), skilled in building scalable, high-performance dashboards. Experienced in optimizing DirectQuery models, designing Snowflake schemas, and implementing Git-based version control, along with gateway configuration and automated data refresh. Focused on transforming business requirements into actionable insights through data modeling, SQL validation, and interactive reporting.

Experience (Power BI Developer | Nov 2024 – Present) At Extendrum Infotech (Anand)

- Developed **Live Auction & Bidder dashboards for Barrett-Jackson (Dynamics 365 CRM)** using DirectQuery, reducing load time by **55%** through schema optimization and referential integrity, and deployed across multiple environment workspaces in **Power BI Desktop and Service**. Enabling real-time auction monitoring and faster decision-making during live events.
- Designed analytics dashboards for **ICP (International Center of Photography) by integrating Blackbaud data using a custom Power BI connector** and Excel-based ingestion, implementing drill-through navigation and KPI-driven reporting with lifetime giving**, YoY, and MoM analysis** (including first, latest, and highest gift metrics), along with interactive tooltips for enhanced donor insights.
- Developed **Sales & Margin Analysis dashboards for LCY (Dynamics 365, Import mode)**, enabling detailed analysis of revenue, gross profit, and margin trends across products, countries, and time, with drill-through capabilities for transaction-level insights and automated 2-hour scheduled refresh to ensure near real-time reporting.
- Built end-to-end **Power BI solutions for two products**, involving **Snowflake schema data modeling (50+ tables)**, advanced **DAX measures**, **15+ interactive report pages**, **SQL Server data validation**, and **custom JSON theming.**
- Developed **usage and resource consumption dashboards for Duckhorn**, analyzing KPI and YoY trends across energy, water, and emissions to support operational monitoring and sustainability decision-making.
- Delivered domain-specific dashboards (HR, Feedback, Project Tracking) for clients including **American Hydro**, **RHRCO, and Resource Engineering**, enabling KPI tracking, survey insights, and Gantt-based planning using Power BI with interactive features like **bookmarks and slicers with show and hide panel**.
- Built CRM-based reporting solution for Cascade, working with 12+ tables and complex data structures (option sets, multi-select fields) to build structured, scalable tabular reports across 8 pages.

Projects

- Developed a **Microsoft Fabric data pipeline** to ingest XML data from **SharePoint using PySpark** notebooks, automate schema creation, and move data **from Lakehouse to SQL Server** via scheduled pipelines.
- Built a **BlinKit KPI dashboard** using Power BI with time intelligence DAX and integrated Power Automate to trigger automated email reports based on filtered insights.
- Developed a Bank Loan dashboard with **Row-Level Security (RLS**) to enable secure, role-based access for financial data analysis, and configured scheduled refresh for automated data updates.

Education

- MCA, Sardar Vallabhbhai Patel Institute of Technology, Vasad (2022-2024)
  SPI: 9.04, Python, SQL, Machine Learning, DBMS.

- B.S.C, Jamia Millia Islamia, New Delhi (2017-2020)
  CGPA: 7.53, Probability and statistics, Linear algebra.

Skills

- **BI & Analytics:** Power BI (DAX, Power Query, RLS), JSON Themes, Incremental Refresh, Power BI Service, Git/Git Hub Integration.
- **Data Modeling:** Star & Snowflake Schema, Data Integration, Data Validation, Performance Optimization.
- **Programming Language:** Python (Pandas, Matplotlib, NumPy, Seaborn), PySpark.
- **Machine Learning:** Scikit-Learn (Regression, Classification, Clustering, Preprocessing, Model Selection).
- **Database Management**: MS SQL Server.
- **Mathematics:** Linear Algebra, Probability & Statistics.
